AMA INDOOR R/C GUIDELINES

1. Define the flying area.
2. Select a flight line (where pilot will stand when flying).
3. Behind the flight line, designate a “pit area” (where assembly, repairs, etc. are done).
4. Make it known to all that an area behind the “pits” is the place that spectators will be (spectators could enter the pit area at the fliers discretion.).
5. At no time should spectators venture into an active flying area, and fliers should enter only to retrieve a model after clearing it with any other active fliers.
6. A frequency control system must be employed.
